# **TECHNICAL SERVICE BULLETIN**

## **Locking the Capping Turret**

The Clamping mechanism mounted to the turret barrel must be loosened before raising or lowering the turret and retightened when the machine is set to the proper height.

On some machines, additional clamping mechanisms are mounted on anti-rotation posts and underneath the top plate of the turret. These mechanisms must also be loosened before raising or lowering the machine and retightened when the machine is set to the proper height.

- Failure to loosen the mechanisms increases load on the elevating shaft bearings and components.
- Failure to tighten the mechanisms allows movement that will cause wear in the key and key way in the central shaft and turret barrel. This wear will allow misalignment of the capping heads to the center star of the machine.

## **Perrier Rinsers**

Effective January 1, 2004 Fowler Products Co. is the exclusive distributor in the United States for Perrier Rinsers for the Beverage, Chemical, Distilled Spirits, Food, Household, Personal Care, and Pharmaceutical industries. Please contact us for your new machinery needs or parts, service, or training on your current rinsers.

## **Warranty/Exchange/RMA**

All replacement parts are shipped with an RMA number assigned for the defective part. In order for us to properly process your accounts for potential credit, the RMA number must accompany all returned parts. This number is documented along with processing directions on the packing slip.

Please respond via e-mail with what you would like to see included in this bulletin or with any current service issues that require our support. Our email address is [aftermarketservices@fowlerproducts.com](mailto:aftermarketservices@fowlerproducts.com). Please include the name and email address of everyone at your company requiring our bulletin.
